AAU
INNOVATE

Join the community

Welcome to the AAU Innovate platform, where possibilities thrive! Here, you have the opportunity to connect with AAU Innovate and explore our state-of-the-art labs, follow the inspiring journey of our incubated startups, and engage in collaborative efforts to tackle real-world challenges. Join us on this exciting quest for innovation and transformation. Together, let's shape a brighter future!

Green Gaming

+430

The Challenge

Ever thought about saving the planet while developing video games? Dive into the 'Green Gaming' project! Your mission? Transform Cindercat Games' game production into a beacon of sustainability.

Throughout this project, you'll be a sustainability detective, investigating every corner of our game development processes. From energy consumption to resource usage, you'll identify where and how to inject sustainability. You'll also delve into the world of green gaming practices, borrowing brilliant ideas from pioneers in the field.

With this knowledge, you'll craft an action-packed plan for us, helping them morph into a greener, leaner gaming machine. Not only will you be making a tangible impact on the industry, but you'll also contribute to achieving the UN's Sustainable Development Goals 12, 13, and 15.

Join us to make gaming greener and Cindercat Games a sustainability superstar! This is more than a project; it's a chance to be part of the sustainability revolution in gaming.

Schedule

Idea Generation:

It all started in a small room, with a few bright minds, lots of coffee, and a massive whiteboard. We wanted to create something different, something that would make players laugh, engage, and come back for more. Ideas flew across the room, some wild, some wacky, but all with a spark of potential.

We explored diverse game genres, characters, settings, gameplay mechanics, and themes. We dreamt about innovative storylines and how they could be intertwined with intriguing gameplay. We imagined a unique character that could instantly grab attention. After hours of brainstorming and countless cups of coffee, the idea of Glum, the grumpy goblin, was born.

Market Research:

With the game idea of Glum taking shape, we embarked on a research mission to understand the gaming landscape. We sifted through popular genres, titles, and player reviews, focusing on their wants and gaps. Our eureka moment? Realizing there was a need for an action-adventure game with a humorous, distinct character. This confirmed our belief - Glum had a space in the gaming world, and with that, we took our first significant step towards developing "Glum: A Wicked Misadventure."

External Collaboration: Unlocking Boundless Innovation Opportunities

“

Introduction Welcome to AAU-Innovation Open Challenge, where challenge-providers and problem-solvers unite to drive innovation and tackle complex problems head-on. Our platform revolutionizes the way companies, organizations, research institutions, and universities collaborate. By effortlessly posting and pinning challenges and projects, we foster seamless collaboration and unlock a world of limitless possibilities.

The Grundfos Challenge

+430

The Challenge

Grundfos, in collaboration with the Innovation Department at Aalborg University (AAU Innovation), recognizes the urgent need to address the global water crisis. We are committed to finding innovative solutions and advancing research in sustainable water management. By adopting a multidisciplinary approach and fostering collaboration with stakeholders, we aim to tackle the challenges posed by the water crisis.

Through our partnership with AAU Innovation, we invite cutting-edge research, educational initiatives, and practical interventions to develop strategies for efficient water resource management, pollution prevention, and equitable water distribution. By gaining a deep understanding of the intricate relationship between water, society, and the environment, we aim to contribute to global efforts in addressing water challenges.

Commitment to the SDGs

Grundfos and AAU Innovation are both committed to UN SDGs, focusing on SDG 6 (Clean Water and Sanitation), SDG 11 (Sustainable Cities and Communities), and SDG 17 (Partnerships for the Goals). Grundfos develops energy-efficient pumps for water conservation and safe water access, aligning with SDG 6 and 11. They value partnerships and collaboration for sustainable development, reflecting their commitment to SDG 17. AAU Innovation facilitates innovative solutions specifically related to clean water, urban innovation, and sustainable urban planning, supporting SDGs 6, 11, and 17 through partnerships and knowledge exchange.

About The Partners

Who is Grundfos
Grundfos is a Danish company, one of the world's leading pump manufacturers, founded in 1945. It produces a wide variety of products including circulator pumps, submersible pumps, and centrifugal pumps. The company is dedicated to energy-efficient and sustainable solutions, with a strong focus on innovation. Grundfos operates globally, having more than 80 companies in over 55 countries. Their commitment to social responsibility and environmental sustainability remains central to their operations.

Who is AAU Innovation
AAU Innovation is the new innovation hub at Aalborg University. AAU Innovation aims to bridge the gap between academia and industry by supporting researchers and students in developing and commercializing their innovative ideas, technologies, and inventions.

AAU
INNOVATE

“

4Life Solution (formerly SolarSack) began in 2017 at AAU with the invaluable support of HelloScience and the remarkable Thirdroom team. Our progress has been extraordinary, propelling us from prototype to global scale-up. With digital incubation assistance, we forged strategic alliances with industry giants like Novozymes, Grundfos, and the Red Cross in Kenya.

Thirdroom's incubation concept and timeline tool played a pivotal role, providing a clear roadmap and comprehensive vision for collaboration with external partners.

The Digital Incubation from Prototype to Scale Up

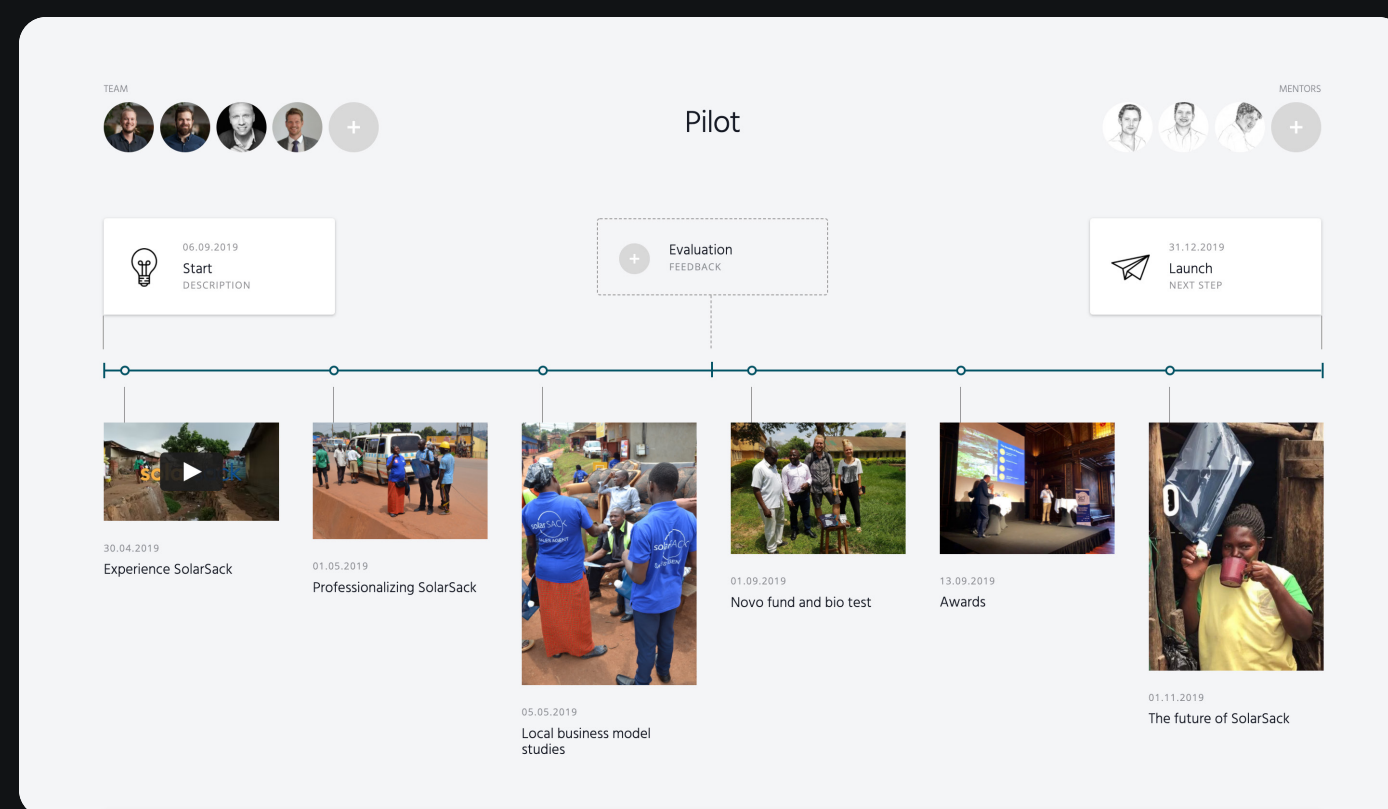

Phase 1: Concept

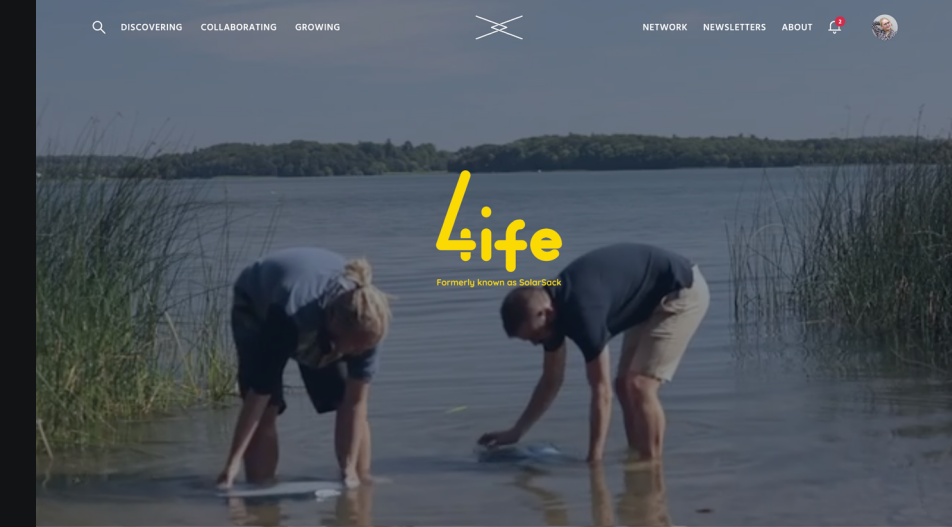

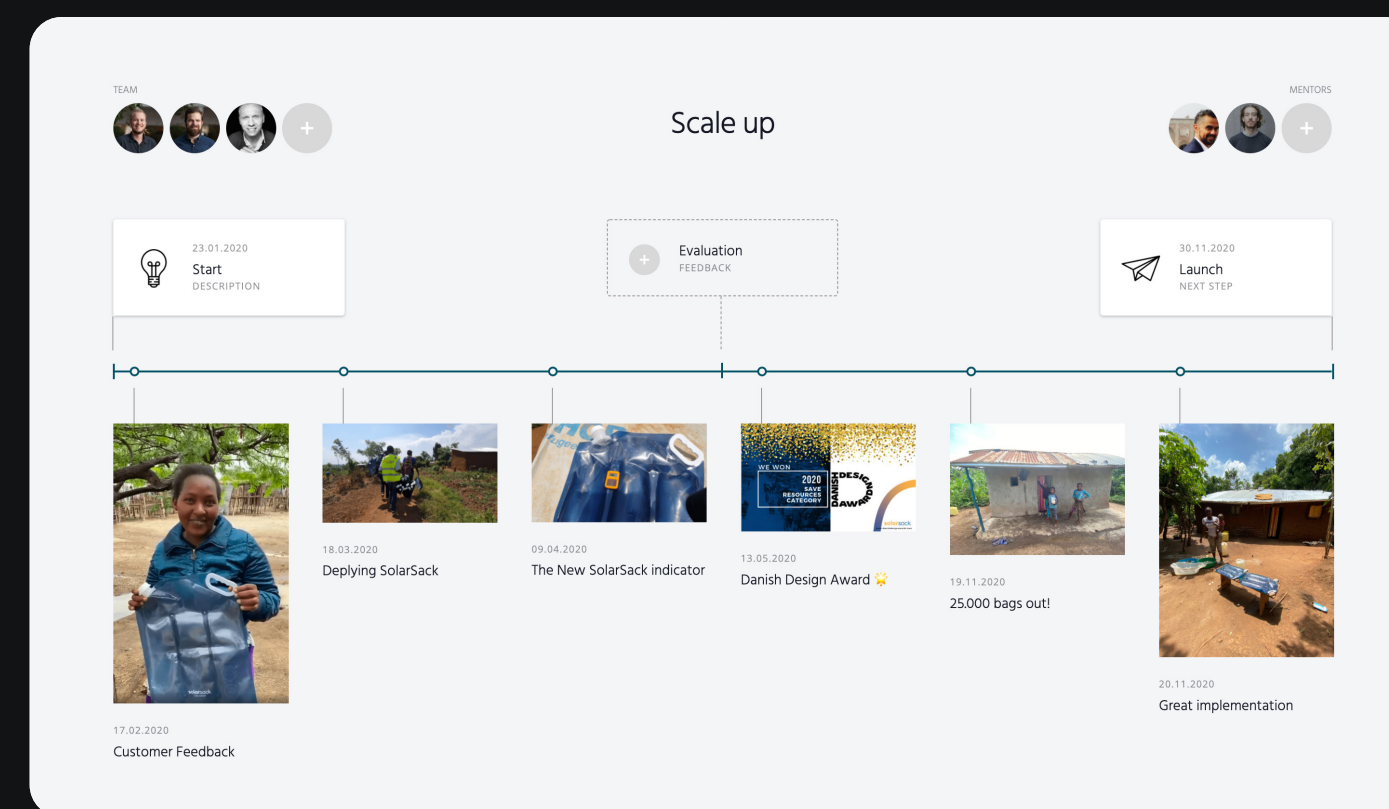

Phase 2: Prototype

Phase 3: Pilot

Phase 4: Scale Up

THE CHALLENGE

While the world grapples with a global pandemic and the unpredictabilities of climate change, there's another issue that continues to threaten millions around the globe: the ongoing water crisis in developing countries. 2.1 Billion people currently don't have access to safe drinking water. Leading to illnesses and a huge environmental impact for the ones choosing to boil the water with charcoal. For too long, communities have been locked out of the resources they need to regain control over their health. Awareness for this issue continues to grow but access to sufficient, reliable, and affordable drinking water continues to be a systemic issue in countries worldwide.

THE SOLUTION

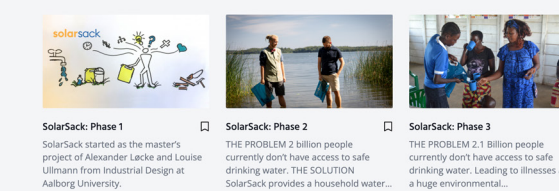

SaWa bag is a water purification device made from laminated plastic, it utilizes a 20-year-old method of water pasteurization, which uses UV rays to kill 99.99% of pathogens usually found in water, making the water as clean as boiled water. One SaWa bag lasts for 500 cycles and cleans four litres of water per cycle, equivalent to a year's worth of drinking water for two persons. We are the cheapest, non-chemical water purification device currently on the market.

CLIMATE IMPACT

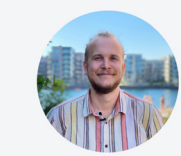

SolarSack's long lifespan and material composition means that SolarSack has almost no carbon emissions. The main alternative to purifying water is by boiling it, a process which emits 500 times more CO2 and uses charcoal from more than 2 large trees.

THE FULL JOURNEY

COLLABORATION WITH RED CROSS

"Our collaboration with the Red Cross is going to be fundamental for the way that we structure our company in the future."

Alexander Lacke
CTO & Founder, SolarSack

ARTICLES

Life and Red Cross
HelloScience is happy to announce a new collaboration between Life Solutions (formerly known as SolarSack) and the International Red Cross.

Q&A with SolarSack: Just back from Uganda
We're proud to have been a part of SolarSack's journey since its start in 2017, and excited about how the...

SDG FOCUS

The benefits of safe water are far reaching, impacting several of the United Nations Sustainable Development Goals (SDGs), including improving health and reducing carbon emissions.
